14. Summary

14.1 Experiences of the project

What did you learn from this project (concretely and generally)?

The most obvious skill that we were able to enhance throughout this project is teamwork. We managed to create a synergy and cooperation between team members. For sure there were some ups and downs during this experience, but we managed to go through all of them and grow as one unit. We learned how to share responsibilities and trust each other.
The experience of the project also gave us an idea about how working on project with a team is. Thus, it gave us a glimpse on what the professional is really like.

What was the most difficult, easiest thing to do?

At first, we faced difficulties dividing work as we wanted everyone to work equally. Also, we found making decision a bit hard as everyone in the group had his own perspective and we had to choose only one so we had to satisfy everyone in the group by making something that can be somehow close to all of our point of view. We cannot say that there was something too easy to do but we can say that working on some of the documents was easier compared to other documents.

Were time and points conform to the tasks?

We spent a lot of time in this projects, and we tried as much as we can to make the time and the points conform to the tasks.

If not, where do you think it caused difficulties?
Have you got any suggestions to change something?

It will be very helpful if this project was a meaningful project or a open source project or tool because that will help us to be gain more work experience and will make us proud that we made a useful and helpful project at the end.

14.2 Protocol

Start (date & time)	Duration (hours)	Performer(s) name	Activity description
19/05/2022	2 hours	All Team Members	Collecting all documents and discussing the summary.
